

Hotel Maluri

Profit & Loss · Q1 2026

Q1 2026

EXECUTIVE FINANCIAL SUMMARY · Q1 2026

Edit Summary

A hotel in genuine recovery —
but not yet across the finish line.

Q1 2026 marks a structural inflection for Hotel Maluri. RevPAR surged **64.8%**, gross margin expanded by **865** basis points, and **Mar 26** delivered the first profitable month in recent operating history. Yet the business remains constrained by a payroll-to-revenue ratio of **53.5%**, a compressed room inventory, and two utility costs spiking far beyond what higher occupancy alone can explain. The story is no longer survival — it is the pace and discipline of scaling back.

Major Strengths & Positives

5 FINDINGS

1 RevPAR of RM 251.41 — the hotel's defining KPI **STAR METRIC**

RevPAR grew **64.8%** YoY via dual-engine recovery: occupancy climbed to **53.1%** while ADR held at **RM 471.73** (+6.7%). Achieved with **31.8%** fewer available rooms — management extracted more revenue per room in a constrained inventory environment.

2 Best month net profit — a structural inflection **MILESTONE**

Net profit of **+RM 8,707** in the strongest month versus a comparable prior year loss of **RM 62,703** — a single-month swing of **RM 71,410**. This validates that the unit economics at current occupancy levels can sustain profitability.

3 OTA commissions cut 31.8% — channel mix improving **STRATEGIC WIN**

Booking.com commissions fell from **RM 69,478** to **RM 47,352** YTD — a saving of **RM 22,126** that flows directly to net margin. Every 1% shift from OTA to direct channels is worth ~RM 14,700 per annum.

4 Gross margin expanded 865 bps to 78.7%

Cost of Sales dropped **22.3%** while revenue grew **9.4%**, creating a textbook operating leverage effect. Room direct costs were contained despite higher throughput; F&B food costs fell in line with the G3 outsourcing.

5 Electricity down 12.8% despite 55% more rooms occupied

Electricity spend fell from **RM 180,877** to **RM 157,637** while occupancy jumped dramatically. Energy intensity per occupied room improved ~43% — a structural cost advantage that should be formally documented and protected.

Major Risks & Concerns

5 FINDINGS

1 Payroll at 53.5% of revenue is the primary barrier **CRITICAL**

At **RM 787,363** YTD, the ratio sits 13–18 percentage points above the 35–40% industry benchmark. This is a structural mismatch between a fixed headcount built for a full hotel and a revenue base still below capacity. **Without a staffing rationalisation plan tied to room reopening milestones, consistent profitability will remain elusive.**

2 Water and gas costs spiking alarmingly **URGENT**

Water costs ballooned **74.4%** (**RM 19,146** → **RM 33,393**) and gas surged **-52.3%** — both wildly disproportionate to the occupancy increase. Probable causes: pipe leakage, meter malfunction, or backdated billing. Left unresolved, this could cost **RM 60–80K annually** above a normalised baseline.

3 Revenue ceiling capped by 31.8% fewer available rooms

occupancy increase. Probable causes: pipe leakage, meter malfunction, or backdated billing. Left unresolved, this could cost RM 60–80K annually above a normalised baseline.

3 Revenue ceiling capped by 31.8% fewer available rooms

Only 13,320 room-nights available vs 19,530 prior year. Maximum room revenue at full occupancy is ~RM 2.08M per quarter — insufficient to absorb the current fixed cost base. **The room reopening timeline is the single most important capital decision facing management.**

4 F&B revenue declined 20.3% — restructuring gap open

G3 Café outsourcing removed ~RM 39,700 quarterly F&B revenue, replaced by only RM 7,500 in rental income — a net gap of ~RM 32K per quarter. Serambi outlet was sharply uneven: RM 101K in March but only RM 33K combined Jan–Feb. A consistent F&B activation strategy remains outstanding.

5 Weakest month missed the breakeven threshold **WATCH**

The monthly breakeven sits at ~RM 480–500K. The weakest month at RM 460K fell short by RM 20–40K, confirming **seasonal demand softness is a recurring structural vulnerability**. A targeted MICE/corporate contract programme is essential to smooth this gap.

ANALYST
Cautiously
Positive
Outlook

The narrative has shifted — but the work is not done. Hotel Maluri enters the next quarter having demonstrably turned the corner. A 64.8% RevPAR expansion, a 22.9% gross margin improvement, and the first profitable month on record represent a genuine step-change in operating quality. However, the business remains **structurally loss-making on a YTD basis**, constrained by **a payroll cost base calibrated for a larger hotel** and a **revenue ceiling imposed by partial room closure**. Non-negotiable priorities: (1) immediate utilities audit to diagnose the water/gas anomalies — recoverable ~RM 15–20K/quarter; (2) a funded timeline for restoring full room inventory. The question is no longer **"can this hotel survive?"** — it is **"how aggressively can we scale?"**
